**Connector Maintenance:**
- A daily, weekly, and periodic inspection of the connector by competent person is recommended.
  - User must establish a regular interval for maintenance as determined by the user media and operational environment.
  - Periodically inspect connector and seal for wear, damage, and proper operation.
- Use only original *FasTest* spare parts that are designed for the application and are subject to strict quality control. See warranty.
- Difficulty of operation after continual use indicates need for lubrication or other maintenance.
- Lubricate on regular intervals under normal operating conditions. Lubrication should be compatible with user application.

**FasTest, Inc. Product Warranty**
FasTest, Inc. warrants its products against defects of workmanship and/or material for 1 YEAR from the date of the sale by FasTest, Inc. This warranty is void if the product is misused, tampered with, or used in a manner that is not in accordance with FasTest, Inc. recommendations and/or instructions. FasTest, Inc. is not liable for consequential or other damages including, but not limited to, loss, damage, personal injury, or any other expense directly or indirectly arising from the use of or inability to use its products either separately or in combination with other products. ALL OTHER WARRANTIES EXPRESSED OR IMPLIED, WHETHER ORAL OR WRITTEN, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE ARE EXPRESSLY EXCLUDED. Remedy under this warranty is limited to replacement of the product or an account credit in the amount of the original selling price, at the option on FasTest, Inc. All allegedly defective products must be returned prepaid transportation to FasTest, Inc. along with information describing the products performance, unless disposition in the field is authorized in writing by FasTest, Inc.

**Old Seal Removal:**
1. Move connector sleeve forward to the disconnect position, opening the gripping collet for easy access to internal parts.
To Install Replacement Seal:

1. Liberally coat the new replacement seal with lubrication. White petroleum is used during initial assembly of standard ST connectors.
2. Begin replacement of seal by manually starting the seal into the groove area. Pinch with fingers and install into opening.
3. The knubbed end of the pick will assist in positioning the seal nose into the groove. This starting position is important for successful installation of the seal.
4. After nose of seal is in place, slowly press down on the back part (peak) of the seal using the knubbed end of pick.
5. The seal will slide into the groove area. If the nose of the seal slides out of position, re-install and repeat steps 1 thru 4.
6. When the new seal is in place, it will fit clearly into the groove area. If a portion of the seal in inverted or can be seen as not in the groove, use the knubbed end of the pick to assist in pulling the seal into the groove. If this is unsuccessful, remove the entire seal and start the installation procedure again.
7. After the replacement seal is in place, actuate the ST connector sleeve once to make sure the connector action is correct.
