# Zero Emissions Processing/ Zero Refrigerant Loss

## What is Zero Emission Processing:

At its core, Zero Emission Processing embodies the collective effort to minimize or eradicate the release of hydro fluorocarbons (HFCs) into the environment, particularly from HVAC-R systems and related equipment. These refrigerants, prevalent in various cooling systems like air conditioners, heat pumps, chillers, PTAC Units, ice makers and pool heat pumps, have been identified as significant contributors to atmospheric pollution and climate change. Thus, the industry's focus is on preventing these emissions during manufacturing, servicing, and even during the disposal of equipment, hence the term "Zero Emission Processing."

# Zero Emissions Processing/ Zero Refrigerant Loss

## How we address this in our connectors with "recovery features":

FasTest Inc. stands firmly in support of these critical environmental initiatives. Our commitment is evident through the incorporation of "recovery features" into our processing and service connectors/tools. These innovative features are designed to seamlessly connect with refrigerant recovery equipment, effectively preventing the escape of refrigerants into the atmosphere during crucial stages like charging, run tests, servicing, and end-of-life recycling processes.

By utilizing connectors with recovery features, manufacturers can achieve Zero Emission Processing goals without compromising efficiency or performance. This ensures compliance with environmental regulations and contributes to a cleaner, more sustainable future for the HVAC-R industry and beyond.

## How we address this through our seal materials:

Recognizing the evolving landscape of refrigerants, e.g. the move to new A2L/A3 refrigerants and compressor lubricants, FasTest Inc. has taken proactive measures to ensure the compatibility of our seal materials with the latest industry standards. We understand the importance of material compatibility in maintaining leak-free connections and preventing emissions.

Through rigorous in-house testing, collaboration with industry partners, and customer feedback, we are taking steps to verify the compatibility of our seal compounds with the new generation of refrigerants. This comprehensive approach ensures that our products meet the stringent requirements of Zero Emission Processing, providing peace of mind to manufacturers and service technicians alike. With FasTest, you can trust that your operations are aligned with the highest standards of environmental responsibility.

# FASTER EVACUATION IS NOW POSSIBLE.

EvacMax™ is an optimized system of matched components to fully utilize the capabilities of the “MAX” family of access ports - CoreMax® & PortMax™ - or even common Packed Angle, Rotolock, Schrader, Ball and other service valves.

While providing the shortest possible evacuation times, EvacMax™ monitors the process in real-time and can monitor multiple vacuum gauges strategically located on the refrigeration system.

The intuitive design allows users to set target vacuum, allowable decay parameters and number of re-tests. EvacMax™ automatically performs the process and records data for later analysis, process optimization and customer record keeping.

# SET. START. GO.

**1 Set**  
target vacuum, vacuum decay and number of retry parameters.

**2 Start**  
the evacuation.

**3 Go**  
EvacMax™ will do the rest.

## EvacMax™ automatically:

- Pumps down to the target vacuum level that has been programmed, and if target is reached, begins a vacuum decay test.
- Continuously signals process status via the high visibility Andon Tower Light.
- If the system fails the vacuum decay test:  
EvacMax will repeat the cycle a predetermined (set) number of times until the refrigeration system passes
- EvacMax™ signals a repeated failure informing the technician that further investigation for leaks or excessive moisture (and possible nitrogen purge) is required.
- Signals a successful completion of the process via the high visibility Andon Tower Light.
- Records the entire process to a downloadable data file.

# REAL-TIME PROCESS MONITORING

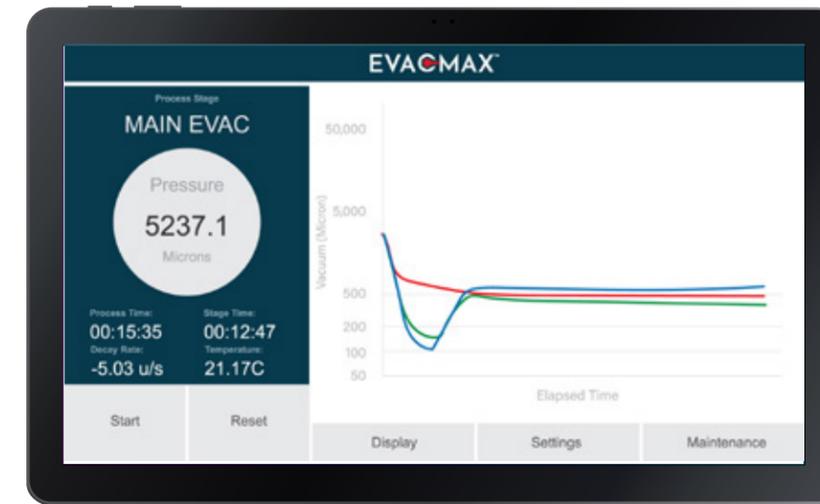

Integrated with ICON technology, technicians now have the ability to perform a fully automated evacuation process, allowing them time to perform other tasks while the EvacMax system performs the evacuation. It's simple, just set testing targets, start the evacuation and walk away.

- Performs a convenient "Self-Test" on the Cart system to check for any leaks (hoses, connectors, vacuum manifold, etc.) prior to performing a lengthy evacuation on a system.
- Automatically perform evacuation and record the data for later evaluation to implement process improvements.
- Track 1, 2, or more wireless vacuum gauges strategically located on refrigeration system to precisely monitor evacuation status.
- Data record to share with/provide to your customer for their quality records.improvement.

## ICON Features

Packed with "Smart" features that streamline evacuation, record keeping and productivity.

The heart of the EvacMax automated evacuation cart is the FasTest ICON control & data acquisition system. It is driven by a rugged, full-featured wireless vacuum gauge that is paired with the exclusive ICON software. EvacMax has unprecedented features that allow the system to perform a "Self-Test", checking for internal leaks prior to performing an evacuation, then performing a fully automated evacuation, plotting the evacuation in real time while monitoring multiple locations simultaneously and recording the data for analysis. The technician can set all evacuation and vacuum decay parameters through the UI and then let the system perform its task!

## Real time data monitoring.

### Track & Display

Track and display the evacuation and vacuum decay test in real time.

### Data Capture

Store data records for internal documentation, process validation, and customer documentation.

### Process Optimization

Evaluate evacuation traces/data to recognize opportunities for improvement.

## Highest accuracy & resolution available.

### Wireless Bluetooth

Wireless Bluetooth enabled vacuum gauge pairs with ICON data acquisition system to accurately monitor, track and record the evacuation and vacuum decay processes.

### Automatic Notification

The ICON system monitors the process status and the integral "light tower" provides the technician with a visual indicator. Process data is stored in CSV format and easily downloaded to USB drive.

## FE / ACCESSORIES

### Pilot Booster

The Pilot Pressure Booster is an air over oil pressure intensifier. It uses 30-65psi (2.1-4.5bar) air pressure to generate 400-600psi (27.6-41.4bar) hydraulic pressure for sealing external threads and irregular surfaces with the FE Sealing Connection Tool. A sealing system consisting of an FE with a urethane main seal and the PB1015 Pressure Booster can produce the seal movement and long life performance needed in production testing applications.

Urethane sealing material is superior to Neoprene® material in high pressure, high abrasion, and high cycle applications. The increased elastomer movement required for sealing irregular shapes or into threads requires urethane seal material. Up to 600 psi pilot pressure is needed to seal deep root external threads. Production testing of threads and hard to seal surfaces can now be automated using the Pilot Pressure Booster and a proper sized urethane seal set in an FE.

**DO NOT USE WITH FI.**

Alert when the main seal is at end of life and must be replaced.

- » **Improve safety during functional tests.**  
SURE SEAL™ provides an instant LED indication of a safe and secure connection. Identify short-connects before media is introduced to prevent spills.
- » **Eliminate leak test false failures to improve first pass yield.**  
With ICON™, if the product fails a test, the connections should not be a source of leaks.
- » **Increase throughput and reduce downtime.**  
Safe, reliable, and consistent connections every cycle - test more, quicker. Reduce rework and the need to retest.
- » **Collect tool data.**  
Gather data on historical use, actuations, and cycle count to get better testing results.
- » **Optimize seal maintenance.**  
SEAL LIFE™ indicates when the main seal needs to be replaced.
