Vacuum to 700 psi (48.2 bar)	-40°F to +250°F (-40°C to +121°C)	Stainless Steel, Neoprene®

COREMAX® SEATS

For complete access valve.

- 1 Specifically designed for refrigeration applications maximizing flow and robust sealing technology.
- 2 The CoreMax® core utilizes one elastomeric seal to seal both the valve as well as the joint between the core and the seat. There is a metal to metal seal between the core and seat to ensure a complete seal.
- 3 The valve core pin position is manufactured to exact tolerances for constant sealing and maximum valve opening for the highest flow available. The Valve conforms to ARI standard 720 for pin height
- 4 The CoreMax® valve has a 7/16-20 45° flare which is the industry standard for access valves, so all standard service tools can be used.

- Manufactured to exacting tolerances, the seat is designed to mate with the CoreMax® valve core and form the sealing capability
- Designed with gripping and sealing surfaces to work with the CoreMax® system tools Internally valved
- Many options are available to fit any user system

ICON™

INTELLIGENT CONNECTION TECHNOLOGY

FasTest's ICON™ adds sensing capabilities to our mechanical Sealing Connection Tools. ICON™ Tools include instant LED visual feedback and data output to improve sealing connection accuracy, maximize production efficiency, and optimize maintenance.

ICON™ features:

SURE SEAL™

Instant LED feedback verifies a good connection prior to starting a test.

SEAL LIFE™

Alert when the main seal is at end of life and must be replaced.

» Improve safety during functional tests.

SURE SEAL™ provides an instant LED indication of a safe and secure connection. Identify short-connects before media is introduced to prevent spills.

» Eliminate leak test false failures to improve first pass yield.

With ICON™, if the product fails a test, the connections should not be a source of leaks.

» Increase throughput and reduce downtime.

Safe, reliable, and consistent connections every cycle - test more, quicker. Reduce rework and the need to retest.

» Collect tool data.

Gather data on historical use, actuations, and cycle count to get better testing results.

» Optimize seal maintenance.

SEAL LIFE™ indicates when the main seal needs to be replaced.
