### ICON™ features:

#### SURE SEAL™

Instant LED feedback verifies a good connection prior to starting a test.

#### SEAL LIFE™

Alert when the main seal is at end of life and must be replaced.

#### » Improve safety during functional tests.

SURE SEAL™ provides an instant LED indication of a safe and secure connection. Identify short-connects before media is introduced to prevent spills.

#### » Eliminate leak test false failures to improve first pass yield.

With ICON™, if the product fails a test, the connections should not be a source of leaks.

#### » Increase throughput and reduce downtime.

Safe, reliable, and consistent connections every cycle - test more, quicker. Reduce rework and the need to retest.

#### » Collect tool data.

Gather data on historical use, actuations, and cycle count to get better testing results.

#### » Optimize seal maintenance.

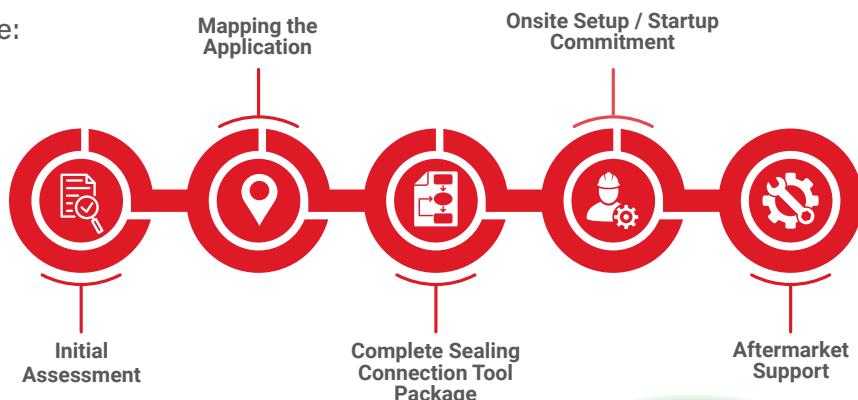

SEAL LIFE™ indicates when the main seal needs to be replaced.

## ICON™

### INTELLIGENT CONNECTION TECHNOLOGY

FasTest's ICON™ adds sensing capabilities to our mechanical Sealing Connection Tools. ICON™ Tools include instant LED visual feedback and data output to improve sealing connection accuracy, maximize production efficiency, and optimize maintenance.

### ICON™ features:

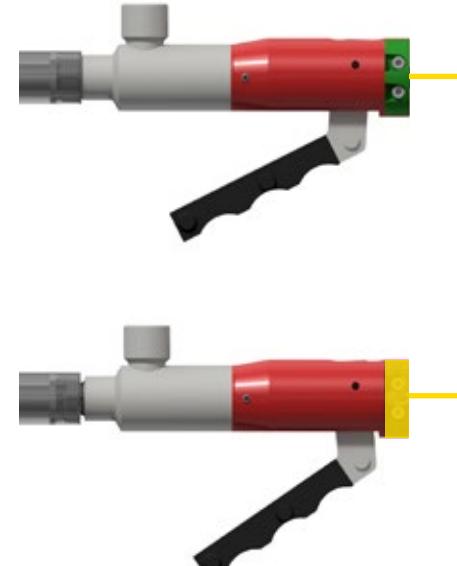

#### SURE SEAL™

Instant LED feedback verifies a good connection prior to starting a test.

### System Overview:

#### CONNECTED

Verify connections are good prior to starting a leak test and provide operators instant positive feedback to simplify training.

#### RECONNECT

Recognize short connects before hazardous spills occur in functional testing, or prevent wasteful False Positive results in leak testing.

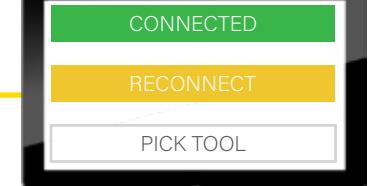

#### PICK TOOL

Controllable LED signals operator to use specific tool.

#### User's System

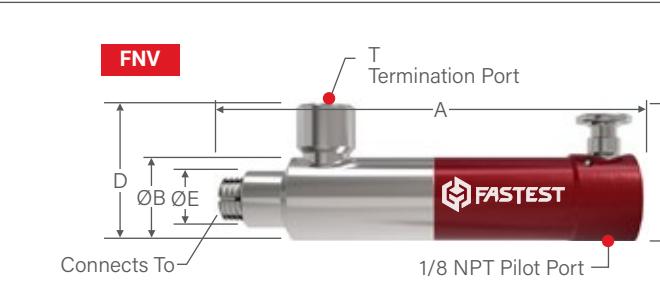

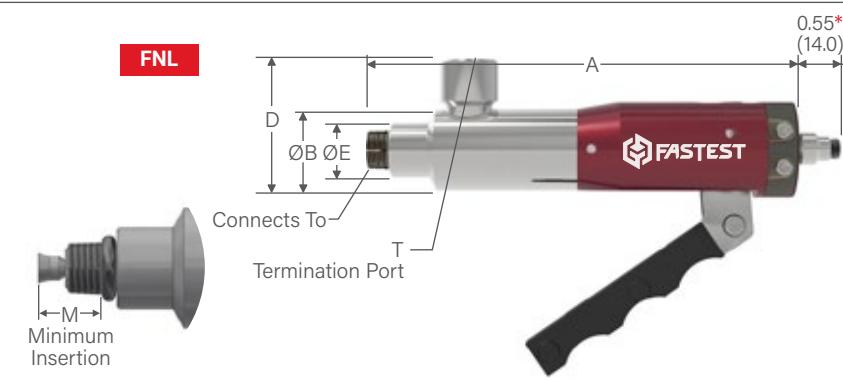

##### HMI

Standalone install or tie into PLC

- Quickly setup ICON™ Tools
- Eliminate the need for PLC programming
- Can be powered from wall adapter (included) or from a PLC (24VDC)

\* Additional seal material types available, consult factory.

\*\* Operating Temp: 32°F-100°F (0°C-38°C) for ICON™.

**i** Sealing Connection Tool and test part should be rigidly fixtured to prevent separation when under pressure (fixture not required for vacuum applications).

**1** Automated processes and high volume production testing including pick-and-place and delicate robotic handling applications

**2** Capable of sealing conventional and unique sealing surfaces including threads with the addition of a pilot booster (see page p. 64)

**3** Quick change seal sets to accommodate multiple sizes of tubing and easy field maintenance - use neoprene for standard sealing, use urethane for maximum abrasion resistance / high pressure and duty cycle applications

### ACTUATION METHOD

**Pneumatic:** Pilot pressure applied to seals with no metal contact and uniform seal movement seals inside tubes and pipes with no marring.

## ICON™

### INTELLIGENT CONNECTION TECHNOLOGY

FasTest's ICON™ adds sensing capabilities to our mechanical Sealing Connection Tools. ICON™ Tools include instant LED visual feedback and data output to improve sealing connection accuracy, maximize production efficiency, and optimize maintenance.

### ICON™ features:

#### SURE SEAL™

Instant LED feedback verifies a good connection prior to starting a test.

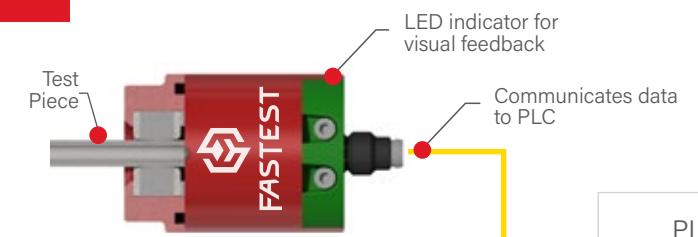

#### SEAL LIFE™

Alert when the main seal is at end of life and must be replaced.

### System Overview:

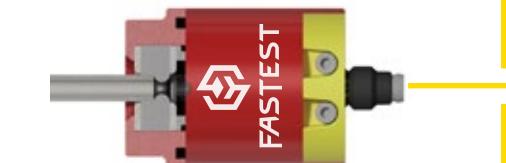

#### CONNECTED

Green indication of a good connection.

#### RECONNECT

Recognize a connection issue before causing a false failure.

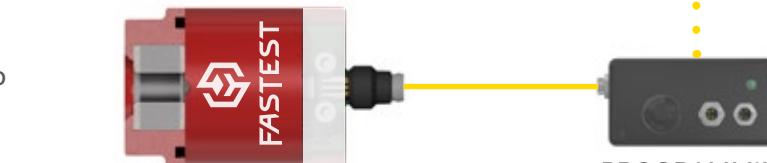

#### WORN SEAL

Alert when main seals should be replaced.

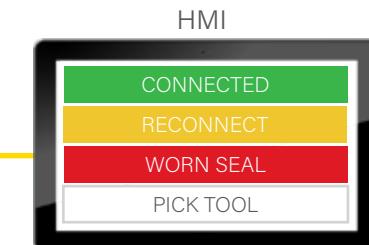

#### PICK TOOL

Controllable LED signals operator to use specific tool.

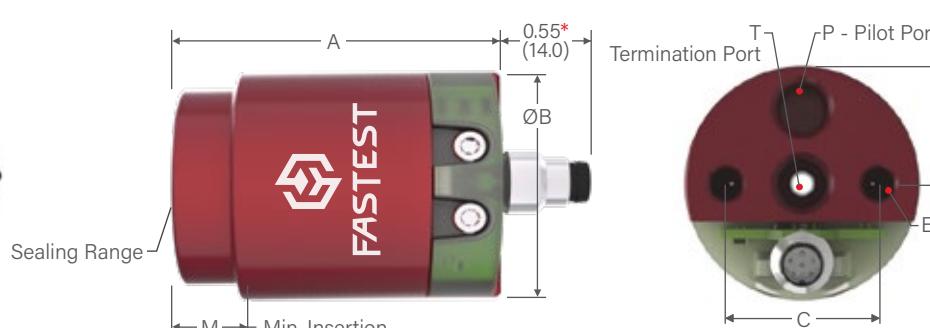

#### User's System

Standalone install or tie into PLC

- Quickly setup ICON™ Tools
- Eliminate the need for PLC programming

• Can be powered from wall adapter (included) or from a PLC (24VDC)

\*Dimension only applies to FE with ICON™ Technology  
(Base Part Numbers that include "CV04ANA" or "CV04SSR").

## FE / ACCESSORIES

### Pilot Booster

The Pilot Pressure Booster is an air over oil pressure intensifier. It uses 30-65psi (2.1-4.5bar) air pressure to generate 400-600psi (27.6-41.4bar) hydraulic pressure for sealing external threads and irregular surfaces with the FE Sealing Connection Tool. A sealing system consisting of an FE with a urethane main seal and the PB1015 Pressure Booster can produce the seal movement and long life performance needed in production testing applications.

Urethane sealing material is superior to Neoprene® material in high pressure, high abrasion, and high cycle applications. The increased elastomer movement required for sealing irregular shapes or into threads requires urethane seal material. Up to 600 psi pilot pressure is needed to seal deep root external threads. Production testing of threads and hard to seal surfaces can now be automated using the Pilot Pressure Booster and a proper sized urethane seal set in an FE.

#### DO NOT USE WITH FI.

# FX / MODULAR DESIGN

## FASMATE FX MODULAR DESIGN

The innovative modular design of the connectors allows the technician to change the method of actuation by simply unscrewing the rear portion of the connector and replacing it with the desired form of actuation.

This feature provides flexibility to accommodate changes in the manufacturing processes, production increases and operator use preference. An additional advantage is the ease of field service for these components should they become damaged or require maintenance.

## LEVER

Simple, straight forward mechanical operation.

## THUMB VALVE

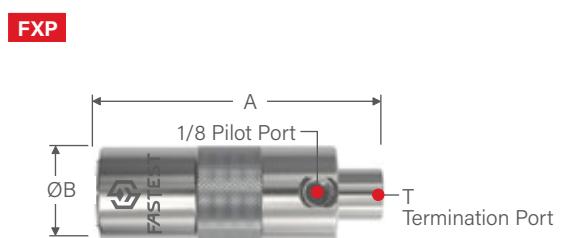

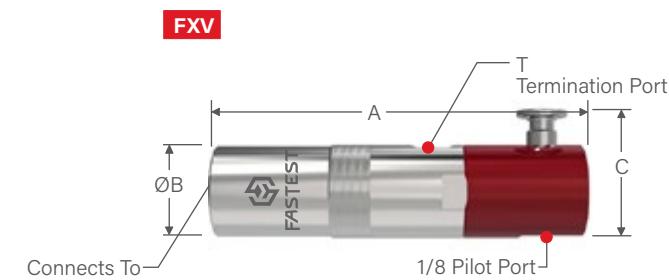

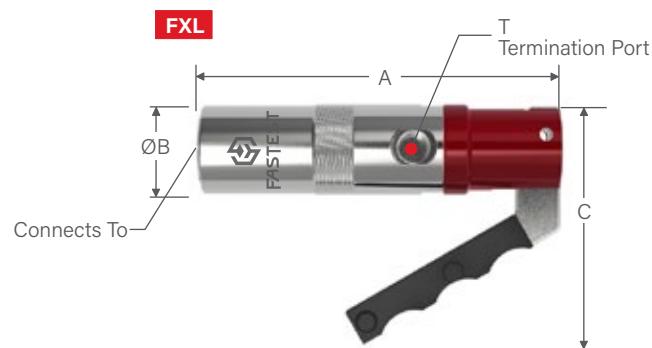

Easy, ergonomic thumb button. When depressed, allows insertion / removal of connector from port.

## PNEUMATIC

Requires a separate air valve. Desired for applications that require freedom of movement of technician's hands.

## SPECIFICATIONS

Pressure Rating	Operating Temperatures	Materials of Construction
Vacuum to 5 psi (0.345 bar)	0°F to +200°F (-17°C to +93°C)	Anodized Aluminum, Brass, Molded Nylon Handle

\* Additional seal material types available, consult factory.

## ACTUATION METHOD

**Lever Handle:** Two way actuation handle is simple and ergonomic for production applications.

Insert the connector into the gas valve and then actuate the handle. The gripper seal expands and pulls the face seal against the gas valve body, creating a seal between them and simultaneously opening the internal shutoff valve. This allows the flow of gas into the gas valve.
