

COREMAX^{SV}™

ADVANCED SPLIT SYSTEM SERVICE VALVES

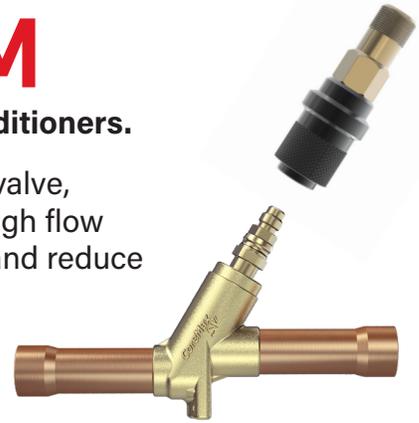

Fast | Safe | Efficient | Green

COREMAX[®] SV SYSTEM

Replaces conventional service valves in split system air conditioners.

With the advantages of FasTest's leak-tight CoreMax high-flow valve, the CoreMax service valve and single processing tool provide high flow zero emission processing to improve manufacturing efficiency and reduce tooling costs.

INTEGRATED COREMAX[®] VALVE

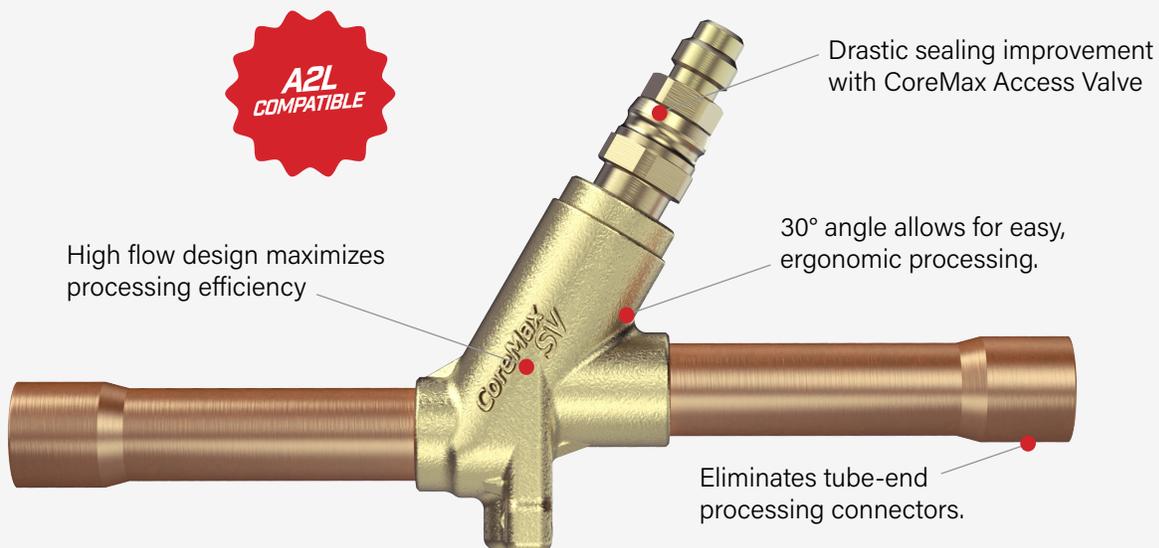

Field-proven with millions of installations at major HVAC manufacturers.

The CoreMax Access Valve & Seat System provides up to five times greater processing flow than common Schrader[®] type valves for faster field installation & servicing, and has dramatically improved sealing performance. Plus, it provides easy, and leak-free system accessibility compared to conventional Service Valves with their leak prone Schrader type valves and is widely recognized for its high performance, productivity and reliability.

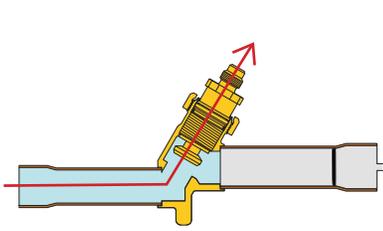

SUPERIOR BODY DESIGN

Unique design offers very high efficiency and superior ergonomics

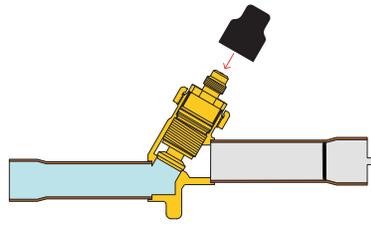

PROCESSING PERFECTED

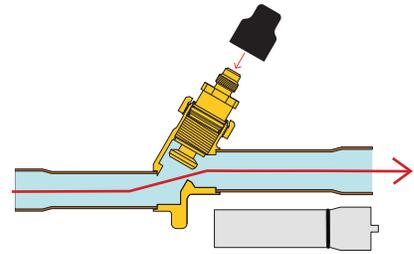

Improve your split system design with CoreMax SV. Faster processing, reduced tooling costs, zero refrigerant emissions, & improved ergonomic design.

Factory-ready for processing

COREMAX SV vs. CONVENTIONAL SERVICE VALVES

	CoreMax SV	Service Valve
ZERO EMISSIONS	✓	✗
HIGH FLOW	✓	✗
SINGLE CONNECTOR	✓	✗

FAST

High flow connectors connect and seal instantly for faster processing.

SAFE

Fail-safe design automatically shuts off flow at both ends of connection if accidentally disconnected under pressure.

EFFICIENT

Unique body design eliminates right angles in flow path, reducing pressure drop and increasing SEER rating.

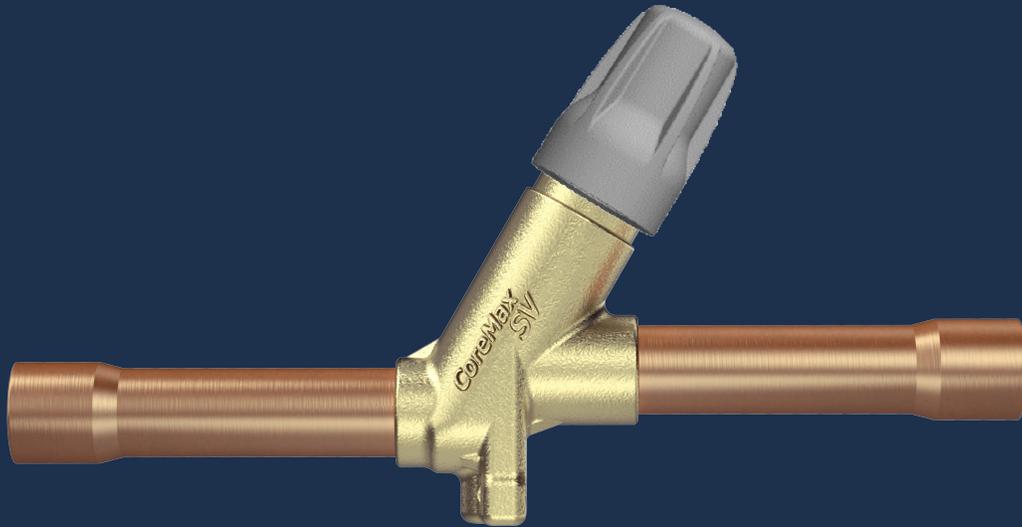

GREEN

Zero emission processing and the ability to reclaim refrigerants.

COREMAX SV

COREMAX SV™

HIGH EFFICIENCY AND SAFE, ZERO EMISSION PROCESSING

The CoreMax SV replaces and improves upon conventional service valves in split system processing applications.
